

Triangles 101

The triangle is one of the first geometric shapes we learn as children, but this simple shape has many interesting properties that appear in virtually all areas of mathematics. What are its symmetries? How can we construct extremely complicated shapes from simple triangles? What does a 'triangle' mean on a sphere? We will investigate these and other ideas at the next...Evanston Math Circle!

Come join us virtually at the:

EVANSTON MATH CIRCLE **Saturday, February 26, 11-12:30**

The session will be held live via Zoom. A link to the meeting will be sent out to those on our email list the morning of the event.

Math Circle is geared towards eager middle-school students, but students of other ages and backgrounds are welcome as well. More information is available at <http://www.math.northwestern.edu/~scanez/mathcircle/>
