

To Infinity and Beyond

Are there more perfect squares or perfect cubes? Are there more rational numbers or irrational numbers? How can a full hotel with infinitely many rooms accommodate a bus that shows up with infinitely many more guests? To answer these questions, we will need to come up with some rules which will allow us to describe and compare things which are infinitely big. To learn how, join us at the Evanston Math Circle!

Come join us virtually at the:

EVANSTON MATH CIRCLE **Saturday, March 27, 11-12:30**

The session will be held live via Zoom. A link to the meeting will be sent out to those on our email list the morning of the event.

Math Circle is geared towards eager middle-school students, but students of other ages and backgrounds are welcome as well. More information is available at <http://www.math.northwestern.edu/~scanez/mathcircle/>
